SUMMARY

Software Engineer with 2+ years building enterprise web and mobile applications and developer tooling on the Mendix low-code platform. Delivered government and enterprise projects across the UAE, Saudi Arabia and India — HRMS, legal document systems and API integration — on schedule. Experienced with GCP Apigee and Application Integration, native and hybrid mobile deployment to the App Store and Play Store, and AI-assisted developer tools. IEEE-published in IoT.

TECHNICAL SKILLS

Low-Code	Mendix (microflows, nanoflows, pluggable widgets, native & hybrid mobile, Java actions), Mendix Studio Pro
Languages	TypeScript, JavaScript, Java, Python, Kotlin, Swift, C#, SQL
Frontend	React, React Native, HTML5, CSS3, Bootstrap
Backend	Node.js, Express, Spring Boot, REST APIs, MongoDB, MySQL
Cloud & Integration	Google Cloud Platform, Apigee, GCP Application Integration, Microsoft Azure, Jira API, Oracle Fusion API, Microsoft Graph API, OAuth/JWT
Mobile & DevOps	iOS/Android deployment, Apple Wallet & Google Wallet integration, push notifications, Apple Developer Portal (certificates & provisioning profiles), Docker, Playwright, Git, CI pipelines
AI & Media	MCP servers, LLM APIs (OpenAI, Gemini, Anthropic), FFmpeg, YOLOv5, WebGazer

PROFESSIONAL EXPERIENCE

Software Engineer

RapidData — Chennai, India

Jun 2025 – Present

- Build enterprise web and mobile applications on Mendix for government and corporate clients across the UAE, Saudi Arabia and India, delivering each engagement on schedule.
- Integrate third-party systems with Mendix — Jira, Oracle Fusion and Microsoft Graph — and design and secure API proxies and integration flows on GCP Apigee and Application Integration.
- Develop custom Mendix pluggable widgets and high-performance Java actions, and build native and hybrid mobile apps published to the App Store and Play Store.
- Automate document generation and transactional email with Node.js and Nodemailer.

Trainee Software Engineer

RapidData — Chennai, India

Jul 2024 – Jun 2025

- Built full-stack features across Mendix, React and Java, focusing on reusable microflows and nanoflows for scalable applications.
- Developed Java actions for high-performance data handling using lists and hash maps.

Web Development Intern

PG Softwares — Coimbatore, India

Jul 2022 – Aug 2023

- Built responsive websites and web applications in HTML, CSS, JavaScript, Java and MySQL.
- Customised e-commerce, live-support, FAQ, classifieds and blog portals.

KEY CLIENT PROJECTS

- **Bahri — Employee Hub (HRMS):** Web and hybrid mobile HR platform deployed to the App Store and Play Store. Implemented Apple Wallet and Google Wallet employee passes (Java/JAR built in Eclipse), push notifications, and managed certificates and provisioning profiles in the Apple Developer Portal.
- **KHDA — Legal Document System:** Multi-level approval workflow with an in-browser document editor and annotation, built on the Apryse (PDFTron) document SDK.
- **Dubai Department of Finance — CHO:** Internal enterprise application supporting legal and governance workflows for a Dubai government entity.
- **Kirloskar (KPMG):** Enterprise mobile application delivered end to end.
- **Apigee & GCP Application Integration:** Designed, secured and deployed API proxies and integration flows on Google Cloud connecting enterprise systems.

DEVELOPER TOOLING & OPEN-SOURCE

- **WidgetForge:** Browser-based pipeline that generates a complete Mendix widget — TSX, XML and a deployable MPK — from a natural-language description. Multi-provider LLM support (OpenAI, Gemini, Anthropic), BYOK, live build-log streaming.
- **mxtest-cli:** Zero-config CLI to build, run and end-to-end test Mendix apps using Docker and Playwright.
- **mcp-redmine-rd:** MCP server bridging an issue tracker into AI coding agents, carrying tickets and screenshots through to verified fixes.
- **rapid-reporter:** Chrome/Edge extension for one-click developer bug reports capturing screenshot, console, network and DOM state. MIT-licensed.
- **react-native-airfob:** BLE tap-and-go access-credential module with native modules in Kotlin and Swift behind a single JavaScript API.

PROOFS OF CONCEPT

- RTSP video stream processing pipeline (Node.js, FFmpeg).
- Real-time object detection (YOLOv5) and browser-based eye tracking (WebGazer).
